

REMOTE CHECK STUDY

Remote Check is a convenient, at-home testing tool that allows you to complete a hearing review using your N7 or Kanso2 sound processor and a smartphone*—without having to travel to the clinic. **(*NB only compatible with iPhone at present)**

The check allows you to check how you are doing with your implant using the following activities:

1. Take photos of the implant site for clinician review
2. Check your electrode function
3. Complete a hearing test through your implant
4. Test your ability to hear in background noise
5. Complete two short questionnaires on how you are hearing and managing your device/s

How does Remote Check work?

The check is accessed through your Nucleus Smart App once you have been enrolled by your clinician and the feature has been activated. A full remote check generally takes 20-40 mins to complete

The Ear Science Institute Australia and University of WA are currently undertaking a research project to investigate the benefit of remote check for cochlear implant users.

We are looking for people who;

1. Have been using their implant for 12 months or more **OR**
2. Who have just started out with their implant

Participants may either be enrolled in remote check or being a control in the study.

NB Enrolment in the study does not prevent you from coming into the clinic for appointments whenever required and you are under no obligation to participate.

If you are interested, please speak to your clinician or email: cathy.sucher@earsience.org.au and a participant information sheet will be provided
