

Understanding interactions between audiologists and adults with **significant hearing loss.**

What are the barriers and drivers to optimising the hearing of adults with significant hearing loss?

If you are an adult who uses hearing aids or an audiologist working with adult hearing aid users, we would like to observe your hearing aid appointment.

This will help to identify staff and patient communication practices and identify common issues that may limit the ability to discuss cochlear implants.

If you wish to participate, we will observe your hearing aid appointment, as it occurs in your normal clinic, by video link (not recorded).

All information will be kept private and confidential. There are no other requirements on your part.
